EDUCATION

Georgia Institute of Technology

M.S. Computer Science — Artificial Intelligence concentration

Jun 2027 (expected)

Carleton College · GPA: 3.90 / 4.0

B.A. Computer Science (4.0) & Statistics (4.0) · Coursework: Software Design, Algorithms, Data Science, Advanced Statistical Modeling

Jun 2025

TECHNICAL SKILLS

Languages & Frameworks: Python (PyTorch, TensorFlow, Scikit-Learn), SQL, R, Java, C, MATLAB; actively learning TypeScript / Node.js

Infrastructure & Cloud: AWS (EC2, GPU compute, S3), PostgreSQL, RESTful API design, Python data pipeline engineering

Domain Expertise: Healthcare data systems & clinical record processing, fintech / blockchain infrastructure, ML model development, frontend UI (React, R Shiny)

Awards: 1st Place, MUDAC Data Analytics Competition 2024 · Outstanding Undergraduate Research, CRA 2025

RELEVANT EXPERIENCE

Software Engineering Intern · PH Career Consulting · Shanghai, China

May 2025 – Aug 2025

- Built frontend UI for a healthcare claims management system enabling end-user interaction with complex insurance workflows — directly in the TPA and health plan administration space.
- Designed and deployed a PostgreSQL database to organize and efficiently query client records, improving data retrieval performance for a production system.

AI Researcher · Carleton College CS Research (NWEA collaboration) · Northfield, MN

Jun 2023 – Jun 2025

- Led development of a Variational Autoencoder (VAE) in PyTorch to predict standardized test outcomes; used BERT embeddings for feature extraction and AWS GPU servers for scalable training. Paper accepted at EDM 2025.
- Engineered fairness-auditing pipelines to measure and mitigate demographic bias in model outputs, developing new metrics and data augmentation techniques to ensure equitable performance across diverse student populations.

Blockchain Research Associate — Data Engineering · Decryption Capital · Chicago, IL

Jun 2024 – Oct 2024

- Architected a Python pipeline (scraping, normalization, analysis, visualization) spanning 30+ blockchain protocols, cutting manual data collection by 90%+ and enabling real-time market monitoring.
- Built valuation models for emerging protocols; contributed data infrastructure to a \$10M AUM portfolio that consistently outperformed both the Bloomberg Galaxy Crypto Index and the S&P 500.

Technical Product Manager Intern · Fresenius Medical Care R&D · Shanghai, China

Jan 2023 – May 2023

- Built end-to-end data processing software in Python for a healthcare platform (PDonline), ingesting and structuring 5,000+ patient records from 20+ hospitals — directly analogous to claims management infrastructure at a TPA.
- Owned the full product lifecycle: translated complex clinical data requirements into a streamlined workflow, then shipped the tool that processed those requirements at scale.

TECHNICAL PROJECTS

吃 · Eating Alone Together — Interactive Web Documentary

May 2025

- Designed and built a single-page web documentary on food and cultural identity, featuring a chapter-based audio player, animated scroll-reveal sections, an interactive portrait drawer, drag-scrollable photo gallery with lightbox, and data visualizations. Migrated codebase to a modular HTML/CSS/TypeScript architecture.

Augmented Reality 3D Digital Repository · Carleton ITS & Digital Archives · Northfield, MN

Aug 2024 – Jun 2025

- Built a React-based platform using Google Model Viewer to render and serve 3D-scanned skeletal models, supporting interactive web display and native AR on mobile — demonstrating full-stack frontend and asset-pipeline engineering.

Interactive Education Data Dashboard · Carleton College × Local High School · Northfield, MN

Dec 2023 – Mar 2024

- Built a full-stack R Shiny dashboard backed by a Random Forest model, giving educators a live tool to explore learning-trend data — end-to-end from data modeling to deployed interactive UI.
